Community Data Program

CCSD's flagship initiative

Source: Statistics Canada, 2015 T1FF Family File, Custom Order for CCSD's Community Data Program. *After-tax Low Income Measure (LIM). Note: The definition of working poverty includes people between the ages of 18 and 65 living independently and earning more than \$3,000 but less than the LIM. The category excludes students. Income ratios compare the incomes of people at the different points on the income spectrum, for example, a person at 90th percentile vs. someone at the 10th decile. The Community Profile series is produced by the Canadian Council on Social Development (ccsd.ca) using data available from its Community Data Program (communitydata.ca).
